

# Cargolog®

## Transportation data log system

*For Supervision of transports*

### Online with GSM/GPRS

2009 Edition 5

**With GSM/GPRS you get an cost-effective, secure and flexible control during transport and handling of goods. Information is sent in real-time directly to your PC with GPS-position, which makes it possible to see where your goods are located.**

Quality assurance system for transport and handling of goods with information in real-time allow you to act immediately when abnormal events occur. You can present and distribute information during transport. Whether you are interested in temperatures or the forces your goods are exposed to, you get the information directly with GPS-position. This allow you to see what has happened and where your goods are located.

#### Activate via SMS

The Cargolog Impact Recorder is a complete system that measures and gives you information about acceleration, temperature, humidity, angles and GPS-position. It is designed to suit most products and transports. Alarm levels are determined by the user to be activated when the measured values exceed these levels. The data is sent cost-effective through GSM/GPRS.

Logged data can also be transferred through GSM/GPRS by activating the registration unit via SMS that you send. You will then get the information for the logged period. With this you always have control over your goods, what has happened and where it is.

#### Technical specification FAT90V2 VTC

**Software:**  
Available for  
Win 2000, XP, Vista  
**Registration unit:**  
Battery: 3,6V Li  
Weight: 500g  
**Dimensions:**  
155x155x45 mm  
**Capacity of memory:**  
up to 60 000 registrations  
**Fields of measurement:**  
**Temperature:**  
-39 to +80 °C ±0.5°  
**Humidity:**  
10% to 90% RH ±3%  
**Acceleration X-Y-Z:**  
±10G ±3%  
**Frequency:**  
2-200Hz low pass filter available  
**Tilt-Angle:**  
-/+90° Measuring of inclination  
in relation to horizontal, ±5°.  
Triggering by G-force.  
**GPS Position:**  
±1,8-20m
